ANALYTICS PLUG-INS

Corvil Analytics Plug-ins decode and analyze protocols and applications on the network in real-time, transforming that real-time, indexed information about business outcomes, customer experience, infrastructure performance, and user activities.

Each Analytics Plug-in contains analytics specific to a protocol or application which:

- Fully decodes the protocol from network packets
- Extracts and indexes application, transaction, user, and business data
- Enriches the decoded data with contextual information specific to the application
- Identifies error conditions or failure codes within the application
- Calculates metrics and analytics of interest for this particular application
